[-] Anonymous login failed or FTP connection failed.
[!] Error: [WinError 10061] No connection could be made because the target machine actively refused it
```

Experiment: 6 Building an anonymous FTP scanner
Date: 22/08/26 using python.

AIM:

To develop a python based anonymous FTP scanner using the built in ftplib module & determine whether an FTP server permits anonymous access.

PROCEDURE:

1) Install python & import FTP and all errors classes from python ftplib module.
2) Define anonymous - ftp scan() to perform FTP scan.
3) Enter authorised FTP server address & establish a connection to FTP server using port 21.
4) Display FTP servers welcome message
5) Attempt anonymous login - If login successful display message anonymous access permitted.
6) Use nlst() to check whether the directory contents are accessible
7) Display available directories handles login or connection errors using exception handling.
8) Close FTP connection after completing the scan

RESULT:

Thus an anonymous FTP scanner was successfully implemented using ftplib module, checked and conditions FTP authorized server, anonymous login listening. The FTP server's anonymous access status was successfully determined.
